Growing Seeds

Materials:

- jars
- wet paper towels
- seeds
- journal

Science Concepts:

Living Things

Directions:

1. Fill a jar with wet paper towels. Make sure to ring out the paper towels so there's no excess water in the jar.

2. Place seeds in the jar, near the bottom half of the jar.

3. Label the jars if you do different types of seeds.

4. Place them by the window and wait. After a couple days, you will see them start to sprout!

5. After about a week, they will really start to grow!.

6. While you're waiting for the plants to grow, observe them and track their growth in the seed journal.
